

**Goddard**

## Internship Opportunity at [Goddard.ml](https://www.goddard.ml), NIC-Karachi

Goddard is an AI startup, incubated at NIC-KHI. At <https://www.goddard.ml/>, we are working with our team to revolutionize latent scientific knowledge discovery by using Natural Language Processing (NLP) tools and Literature-based discovery (LBD).

We are empowering researchers to do more at the same time by augmenting their research capabilities with AI tools. Through Machine Learning-based discovery assistant, Goddard - Discovery is enabling researchers to organize, retrieve, and formulate new intra-disciplinary research ideas - efficiently and conveniently. At Goddard - Discovery, we envision accelerating scientific discoveries and innovations in every domain.

Therefore, in this regard, we want to encourage students to apply for an internship opportunity at our company and learn about the startup culture along with applying their knowledge in the practical world. The interns may be provided with compensation based on their performance.

**Current Internship focus: GUI and front-end development**
